"Roads (modernity), Landmines (war) and Drought (weather) Immiserate Afghanistan's Kuchi Nomads"¹

by Marc W. Herold

Haji Khan used to have 300 sheep, two horses and nine camels. He now has only one camel and lives in a 4m x 2m UNHCR tent in the sprawling refugee camp of Spin Boldak. He recalls other times before the rains stopped. Life was good, "we never used to let our daughters marry people from the city because if they settled they would be like a bird in a cage. Now we are like a bird in a cage."²

For centuries, the nomadic Kuchi tribespeople - Kuchi in Persian means "those who move" - migrated across parts of Afghanistan semi-annually with their caravans of goat, sheep, donkeys and camels. In the eyes of the West, Kuchis are famous as bejeweled and brightly robed nomads. Traditionally, they lived by selling young animals, dairy products, wool, sheepskins, meat, or bartering those goods, for wheat grain and other foodstuffs. Nomads contribute importantly to the national economy in terms of meat, skins and wool. Being able to move from pasture to pasture, nomads escape the limits on size of local herds which villagers are subject to. Kuchis are Pashtuns from southwestern and eastern Afghanistan. In the late nineteenth century, King Abdul Rahman moved some Kuchis into northern areas populated by Tajiks and Uzbeks, a move which resulted in continued ethnic strain.

The Kuchi's lifestyle has been eroded both by long-term changes associated with "modernization" and by devastating short-term events [like the droughts of 1971/2 and 1998/2002, and the wars of the 80s, 90s and today]. Their population was estimated at 2 - 2.5 million in the 60s, 70s and early 80s, but has shrunk to 1.3 - 1.5 million today.

¹ this essay will be included in my forthcoming book 'Modernizing' Afghanistan. How 80 Years of Interventions Impoverished a Frugal Society [Common Courage Press, forthcoming, Spring 2004]

according to a recent study by the UN's World Food Program. Roads, drought, landmines, Russian bombing, U.S. cluster bombs, and war-related impoverishment have all played a role in this halving of the Kuchi population.

A classic academic analysis of the sedentarization of nomads was provided by the Norwegian anthropologist, Fredrik Barth, who analyzed south Persia. He argued the wealthiest and the poorest nomads will tend to settle on land and give-up the nomadic migratory cycle. A pastoral family needs a minimum herd size in order to survive. A wealthy nomad, on the other hand, might experience diminishing returns as his herd size increases and may decide to diversify into investing in land and/or into trade - such diversification also reduces risk. The poorest loose their herds in times of crisis, going into debt and then selling-off animals to pay-back. The wealthy invest their monetary surpluses in land which they then live-on, sometimes hiring impoverished kuchis to tend their herds. This pattern is confirmed by Klaus Ferdinand for the Ghilzai nomads of eastern Afghanistan. The aim of the modernist central administration in Kabul has been,

De quelques publicationrecentes sur les nomades d'Afghanistan et d'Iran," L'Homme 34,4 [octobre-december 1994]: 143-49, which reviews 17 texts on the topic, the majority of which based on fieldwork completed in the 70s before the forces of modernization had irreversible effects upon nomadic life.
of course, sedentarization of the nomads, e.g., as pursued in the Helmand Valley Authority scheme of the 50s and 60s.

A diversity of actual living situations exists amongst the Afghan nomads in regards to the extent to which tent-dwelling pastoralists engage also in agricultural pursuits. Afghan nomads comprise two larger groupings: the western one of the desert southwest largely from the Durrani tribes and the eastern group drawn from various Ghilzai tribes associated with better watered, lusher grazing grounds of the east.

The northward camel trains of the Kuchis carrying wares north began contracting in the 50s, leading to widespread semi-nomadism. Wealthier Kuchi traders were lured into investing in land and some even took up the settled lives of merchants. The rapid development of the road system in the later 50s and 60s - financed by Soviet and U.S. aid - led to severe competition by truckers with the traditional camel caravans. Driven out of business, some Kuchis began operating trucking businesses combined with land ownership.

The slow demise of the Kuchis was greatly accelerated by the warring after 1979. The spreading of land mines and the Russian bombing campaign slaughtered animals and nomads. Incessant fighting often blocked migratory routes. The terrible drought of 1998 - 2002 is responsible for the death of 75% of the Kuchi animal herds - their major economic capital asset. Drought baked winter grazing areas in the southern plains, forcing hundreds of thousands northward, but the snow-melt failed to replenish rivers and summer pastures also failed. Shamir, who lost all 200 of his sheep and goats in the drought, says

"...we used to sing about everything. Women would dance, especially at weddings....but all that has gradually disappeared. Poor people cannot

afford drums and music. This war and now this drought have swept everything away."\footnote{10 “Afghan Nomads Are Nothing Left to Sing About,” \textit{Daily Excelsior} [August 18, 2002], at \url{http://www.dailyexcelsior.com/02aug18/inter.htm}}

Another Kuchi mused,

"we had a good life under the Taliban. There was security and there was peace, and we could go anywhere with our animals...we were not people of any Government. We were only busy grazing our animals."

Many of the once independent, self-sufficient [in conjunction with the tribal peasantry] Kuchis have been reduced to destitute farmers, internally displaced persons, casual laborers, and beggars.\footnote{11 IRIN, “Afghanistan: Focus on Nomads and the Drought,” \textit{IRIN News} [September 20, 2002]}

Haji Mundai, once a leader of a group of eight families, has set up his tent alongside the highway on the scorching plain outside Kandahar. His sheep and goats sold, he works for two dollars a day baking bricks in a kiln.

U.S. cluster bombs and other kinds of unexploded ordnance should be considered 'pollution' as they render soil useless for agriculture and pasture. The burden of landmines and cluster-bombs has been especially heavy for Afghanistan's nomads.\footnote{12 Annasofie Flamand, “Afghanistan's Yellow Flowers,” at \url{http://www.le2001.org/tekst/feature_AfghanistanYellowFlowers1.htm} and Chris Otton, “Afghan Nomads Ready to Settle Down After Drought Devastation,” \textit{Agence France-Presse} [April 26, 2002].} Over a hundred Kuchi nomads were directly killed by U.S. bombs at Karam, Chowkar Karez, Kandahar, Shawalikot, Helmand, and Maiwand. For example, on December 5, 2001, U.S. bombs mistook a Kuchi camp in Shawalikot for a Taliban position - killing 12 people from two Kuchi families. Kuchi encampments have been raided by U.S. troops, e.g., on January 25, 2002, thirty U.S. soldiers backed up by jets and helicopters descended upon a 100 tent camp in the Bak district 28 kms. north of Khost. On September 17, 2003, U.S. Apache attack helicopters fired upon "a tent" in the Shinkay district of Zabul, killing 8-10 sleeping nomads including women and children.

The drums are silent, the sheep sold. Kuchi nomads have little left to sing about.
